

Acute-phase inflammatory markers during myocardial infarction: association with mortality and modes of death after 7 years of follow-up

Giuseppe Berton^a, Rosa Palmieri^b, Rocco Cordiano^b, Fiorella Cavuto^c, Sigismondo Pianca^d and Paolo Palatini^e

Fig. 1

Flow diagram of progress of the patients during short-term and long-term follow-up. Non-CV, noncardiovascular; non-SCV, nonsudden cardiovascular; SD, sudden death.
